**The Norwegian-headquartered offshore and subsea vessel provider DOF Group ASA (DOF) has announced two new offshore contracts in Brazil.**

DOF has revealed that the AHTS vessel *Skandi Logger* has been contracted for a 4-year engagement with Petrobras, with the new employment expected to start in February 2026.

The *Skandi Logger*, an AHTS with 250t bollard pull built in 2009, will be reflagged to Brazilian Flag as part of the contract, in accordance with the shipowner.

This new contract followed the same competitive AHTS tender process that resulted in the contracts of *Skandi Iguaçu*, *Skandi Angra*, *Skandi Paraty* and *Skandi Urca* as previously announced by DOF.

Resulting from another competitive tender process, the *Skandi Achiever* has been contracted as RSV for a 4-year engagement with Petrobras, which is expected to commence in December 2025, in direct continuation of her current contract with another client in Brazil.

Petrobras' contract foresees the utilisation of Achiever's 2 WROVs and subsea crane.

As it is reported, the two contracts have a combined value of more than \$275m.
